Construction Site Sound Blanket Fence is an option job sites can use to help control noise at a construction job site. The fencing material is used as a site (visual) barrier along with a sound barrier. The sound fencing is normally erected before excavation takes place. This helps block noise from the construction site to neighboring residents. The sound fence reducing unwanted noise from bull dozers, jack hammers, pile drivers, construction site trucks, welding equipment, compressors, etc. Engineers and architects are specifying noise control at a construction job site to help mitigate noise for the neighbors property. OSHA has even written documents regarding noise on construction sites.

Unger Technologies offers our construction site outdoor sound blanket as an easy affordable way to screen noise at the job site. Our outdoor ready sound blankets can be directly attached to your existing chain link fencing. Most contractors use nylon zip ties directly through our grommets to attach the sound blanket to the fence.

We have been asked:

Where can I purchase sound blankets....?

What is the best sound control for outdoor fencing....?

My construction site is requiring a sound wall or outdoor sound blankets for the job site....?

We would be happy to answer all your questions. Please call Unger Technologies today at 888.213.4711 to discuss your construction fence sound control project today.
