

# Outdoor Sound Blankets for Construction Fence

©2003-2008 Unger Technologies, Inc. All Rights Reserved.

Outdoor Sound Blankets are being specified and used to reduce construction site noise. Cities are concerned with noise levels disrupting neighbors, condominiums, and residential houses during excavation, drilling, demolition and general outdoor construction noise. Back hoes, graders, compressor, diesel engine and jackhammer noise are all notorious sources of sound at a construction site. Typically a perimeter fence is already installed around a construction site for safety. Our outdoor sound blanket material can be attached directly to this fence to create a sound barrier fence. The sound panels are modular, come with grommets, and are easily installed to the barrier fence.
