

Hydraulic pump noise is very inherent in this industrial machine. eNoise Control can offer sound proofing and sound deadening options for your hydraulic unit.

Floor mounted sound enclosure

The main sources of noise are the power unit (fluid pressure fluctuations), electric motor noise, and pump noise. We typically suggest sound containment using our modular sound blanket (curtain) system. The quilted blankets offer high sound control and easy access for maintenance of your hydraulic pump.

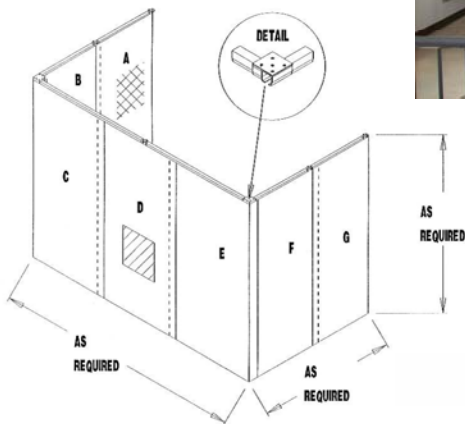

Ceiling mounted sound enclosure

### Features of our quilted sound padding system:

- High sound absorption
- High sound blocking
- Modular sound curtain panels
- Optional track/trolley hardware
- Easy access for maintenance
- Flexible, low cost sound proofing
